LR LANTERN ROW

PREFLIGHT STUDIO / AUTOMATED DIAGNOSTIC

Your file, explained.

A focused review of common CSV import risks.

SOURCE FILE

sample.csv

REVIEW RECOMMENDED

4	0	6
ROWS SCANNED	ERRORS	WARNINGS

AT A GLANCE

The scan found 6 potential issues across 3 data rows. They may affect a product import, but several can be legitimate depending on your template and variants.

WHAT TO CHECK FIRST

01. Row 3 / Price formatting - Review the exact source value. If this is a numeric price, format it as a plain decimal (for example 12.00) without a currency symbol.
02. Row 4 / Product identifier - Compare the row with the current Shopify product CSV template. Add or correct its handle only when required.

Automated heuristics only. Not a manual review, import guarantee, or file correction. No affiliation with Shopify.

Detailed findings

Read each observation, then verify against your source data.

CHECK FIRST

ROW 3 | Variant Price

FOUND
Price is not a plain nonnegative decimal

WHY IT MATTERS
Currency symbols, negative amounts or unexpected punctuation may not match the expected numeric format.

NEXT STEP
Review the exact source value. If this is a numeric price, format it as a plain decimal (for example 12.00) without a currency symbol.

CHECK FIRST

ROW 4 | Handle

FOUND
Missing handle

WHY IT MATTERS
A missing handle may break how product rows are grouped in Shopify. Some continuation rows need special handling.

NEXT STEP
Compare the row with the current Shopify product CSV template. Add or correct its handle only when required.

VERIFY

ROW 3 | Variant SKU

FOUND
SKU also appears on row 2; verify whether intentional

WHY IT MATTERS
The same nonblank SKU appears more than once. That can be intentional, but it may also link inventory records incorrectly.

NEXT STEP
Compare the rows using that SKU and confirm whether they represent the same intended inventory item.

Automated heuristics only. Not a manual review, import guarantee, or file correction. No affiliation with Shopify.

Detailed findings

Read each observation, then verify against your source data.

VERIFY

ROW 3 | Image Src

FOUND
Image field is not an http(s) URL

WHY IT MATTERS
An image reference that is not an http(s) URL may not import as an external image.

NEXT STEP
Check whether this field should contain a publicly reachable image URL. Replace with the intended valid link if necessary.

VERIFY

ROW 5 | Handle

FOUND
Same handle has different titles; inspect variants

WHY IT MATTERS
Multiple rows share a handle but show differing titles. Variants often share handles, so this needs context.

NEXT STEP
Check that the rows belong to the intended parent product and use the correct title structure for Shopify.

VERIFY

ROW 5 | Variant Compare At Price

FOUND
Compare-at price is lower than selling price

WHY IT MATTERS
A compare-at value below the selling price is unusual and may display pricing inaccurately.

NEXT STEP
Confirm the pricing with the source. If you intend to show a discount, verify the compare-at value is appropriate.

Automated heuristics only. Not a manual review, import guarantee, or file correction. No affiliation with Shopify.
